## **PT** HIGH SPEED PNEUMATIC TAPE HEAD

The High Speed PT Tape Head is our pneumatic activated tape head. This tape head can be used as either an edge sealing tape head where no corner seal is required or center sealing where a front and back panel tab leg is not needed. When used as an edge sealing tape head it is matched with our either our MT1E or MS1E type edge sealer. If used for center seal with no front or back tape tab leg it can be matched with most all of our carton sealers with some pneumatic and electrical modifications to the sealer. The High Speed PT Tape Head is available in 2" when used for edge sealing and available in 2" and 3" when used for center sealing without front of back tab leg.
